

Ex No: 12a  
End-End Communication  
at Transport Layer

Aim:  
To implement echo client server  
using TCP/UDP sockets

Algorithm:

```
import socket
import time
def ping_server(host = '127.0.0.1', port = 12345):
    with socket.socket(socket.AF_INET,
        socket.SOCK_DGRAM) as s:
        try:
            s.sendto(b'hello', (host, port))
        except socket.timeout:
            print("Request timed out")
    ping_server()
```

Input/Output:

- If Server is running:  
(no output)
- If server not running:  
Request time out.

for (int i = 0; i < 10; i++)  
 {  
 cout << "Enter a message: ";  
 string msg;
 }

while (true)  
 {  
 cout << "Enter a message: ";  
 string msg;
 }

cout << endl;

return 0;

if (i == 0) cout << "Enter a message: ";  
 else cout << "Enter a message: ";  
 string msg;
 while (true)
 {
 cout << "Enter a message: ";
 string msg;
 if (msg.empty()) continue;
 cout << "You entered: " << msg << endl;
 }
}

while (true)
 {
 cout << "Enter a message: ";
 string msg;
 if (msg.empty()) continue;
 cout << "You entered: " << msg << endl;
 }
}

~~Result:~~

Result:

The program successfully shows that whatever message the client sends the server returns the same message back.

Ex No: 12(b)

End-End Communication  
at Transport Layer using TCP/UDP

Aim:

To implement chat client server  
using TCP/UDP sockets

Algorithm:

import socket

```
def start_server(host = '127.0.0.1', port = 12345):  
    with socket.socket(socket.AF_INET,  
        socket.SOCK_DGRAM) as s:
```

```
        s.bind((host, port))  
        print(f"UDP server running  
on (host {host} port {port})")
```

while True:

```
    data, addr = s.recvfrom(1024)  
    print(f"Received message  
from {addr}:  
{data.decode()}")  
start_server()
```

Input/Output:

UDP server running on 127.0.0.1:12345  
Received message from ('127.0.0.1', 54321):  
Hello

DP

Result:

The program successfully enables interactive communication between client and server.
